

DUNNAGE AIR BAG

Norseman's Dunnage Air Bags secure and stabilize palletized loads inside of shipping containers by inflating to fill any void space between the product and container walls. They're applicable in containers for sea, road or rail or intermodal.

The bags help contain the load and prevent shifting from vibrations during transport. They're much more effective in stabilizing cargo compared to wood blocking and other bracing methods.

Avoid Damage:

- Dunnage bags are high-strength, fabricated from composite polyethylene and polypropylene material. They help minimize load shift by bracing the load and reducing vibration throughout transit.

Cost Efficient:

- Dunnage bags are inexpensive compared to other load securing techniques. In addition, Dunnage bags are reusable.

Easy to Use:

- Dunnage bags cut down on load time as they are placed in the container and aired up in only a few seconds using an inflator tool. No other tools are required for installation and there's no need to puncture bags to deflate them. Open the valve and deflate the bags to be stored and reused.

Eco Friendly:

- Dunnage Air bags are made from environmentally friendly and 100% recyclable materials. The bags are also resistant to moisture and water saturation.

NORSEMAN, YOUR ONE-STOP SUPPLIER OF GEAR2PERFORM.

-  **On-Demand Supply:** Warehousing space and distribution locations across North America.
-  **Exceptional Service:** One-stop supplier of Fabric, Foam and Film Protective solutions.
