

# DEBRIS NETTING

## VISUAL BARRIER WHEN YOU NEED IT, SO YOUR CREW CAN FOCUS ON THE WORK.

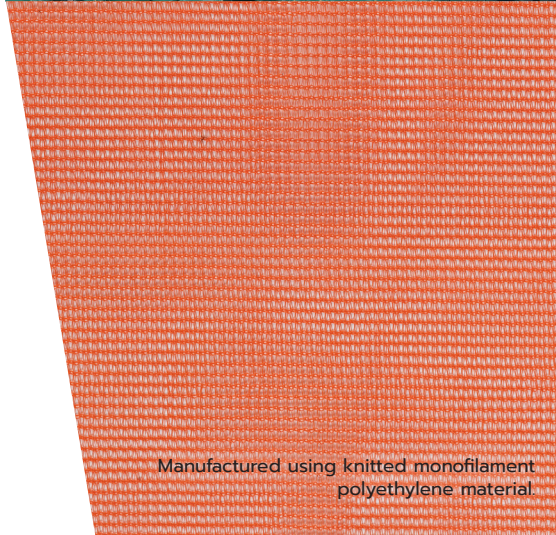

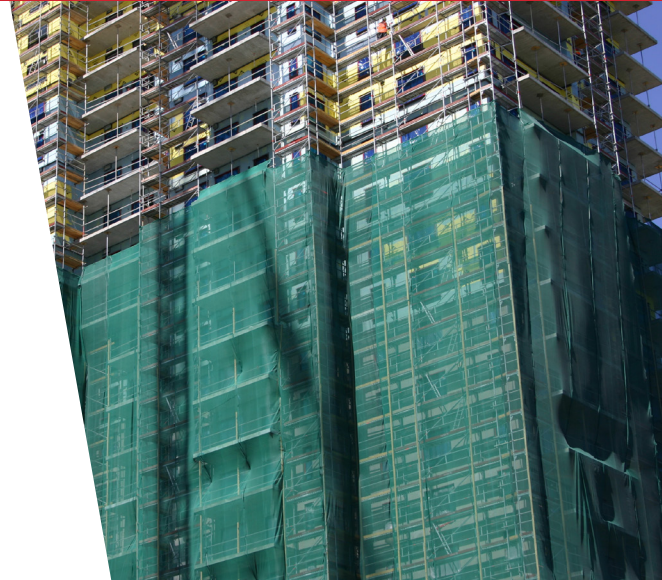

Heavy wind bursts send debris and construction materials flying and take valuable time and energy away from your project. Workers can't perform the way you need them to when they're battling against wind. Your people need protection from the elements, so their items stay exactly where they left them and don't become a hazard to the people working below.

**Norseman's Debris Netting** is built using knitted monofilament polyethylene material, with the edges reinforced for additional strength.

- High-strength Debris Netting lets in light and allows for air movement as it controls and contains dust.
- Essential when you need to keep the elements out and contain debris and items within your jobsite.
- Can be hung vertically or horizontally.
- Allows workers to continue to perform in severe weather, providing a safe and contained workspace that keeps everything where it needs to be, while stopping the elements from disrupting your project.

In stock, ready to ship from one of our distribution locations.

Norseman's Debris Netting is **GEAR2PERFORM**.

Manufactured using knitted monofilament polyethylene material.
