

ROTATIONAL GRAZING – VIRTUAL FENCING

The RDAR On-Farm Climate Action Fund (OFCAF) program supports the adoption and on-farm implementation of Beneficial Management Practices (BMPs) that strengthen rotational grazing strategies by improving forage quality, increasing animal and soil health, and enhancing resilience to changing climates.

Applicants may include one or more eligible Nitrogen Management Soil BMPs in this opening, provided that all program requirements are met. Applicants may receive a maximum of \$100,000 in OFCAF funding from all delivery partners across all BMP categories between 1 April 2022 and 31 March 2028. The minimum eligible project cost is \$10,000 per application. Approved eligible expenditures are reimbursed at up to 85%, subject to applicable cost limits and the applicant's remaining OFCAF maximum.

The 2026-2027 OFCAF program will have a targeted reopening on September 15 - 30, 2026 for Nitrogen Management - Soil BMP projects and/or Rotational Grazing - Virtual Fencing projects with water distribution if required and that:

- Complete project by 1 December 2026
- Have final reports submitted by 14 January 2027
- Have total eligible application costs of at least \$10,000
- Meet all eligibility requirements listed below

Rotational grazing BMPs rely on the following four principles of grazing management.

1. Balanced forage supply with livestock demand
2. Growing season rest
3. Avoidance of vulnerable periods
4. Planned animal distribution

Although these can differ between fields or farms based on terrain, composition, and water supplies, they must all be considered for effective implementation. Water supply and distribution are critical factors in any rotational grazing system since water is essential for life, growth and reproduction. The quantity of water animals consume is affected by growth, pregnancy, lactation, activity, diet composition, and performance. Research indicates that when provided with high-quality water, livestock will drink more, eat more, and ultimately gain weight faster. Planning for reliable water supplies, such as water wells, dugouts, springs, and OFCAF-funded distribution systems (shallow water pipelines, remote watering systems, etc.), is as important as planning the fence locations for an efficient grazing system.

One of the main objectives of improved rotational grazing is to extend the grazing season into fall and, in some cases, winter. A properly managed grazing system can benefit poorer soils by providing nutrients and organic matter, thereby improving soil structure and health. Feed sampling, including forage testing, ensures a balanced diet and promotes good herd health, ensuring the animal's nutritional needs are met throughout the year based on the animal's production cycle (growth, pregnancy, lactation).

Your grazing management strategy will need to describe all of the components above. How are you addressing the four principles? How will you change your fencing to improve your grazing practice? What are your existing water sources, and how will you distribute the water to ensure that you have a reliable supply for your grazing? How may you improve your pasture composition to meet your livestock needs? What changes will you make to your movement of animals to increase the effectiveness of your grazing system?

The BMPs supported by OFCAF must be new to your farm or field. Applicants may request funding to support eligible practices listed in the [OFCAF Program Guide](#). Please outline how you will apply these practices on your farm using the BMP Action Plan on page 4-6 of this form, including labelled maps that show legal land descriptions (LLDs), and field boundaries on an aerial photo or imagery. Any method of outlining and labelling can be used, as long as the fields are visible beneath. The [Guide to Locating and Labelling BMP Action Plans](#) provides further details. Your completed BMP Action Plan must be recommended by a qualified third-party adviser who is a Professional Agrologist (PAg) or

Certified Crop Advisor (CCA); see: the [Guide to Accessing Agricultural Recommendations in Alberta](#). Your BMP Action Plan must be approved in writing by RDAR to be eligible for OFCAF funding.

Important Note: Applicants must **confirm participation and accept implementation responsibilities before funding is considered active** and provide a project start date and a project completion date within 14 days of approval. Funds may be reallocated to other applicants if approval is not accepted through the Pending Project Acceptance in [Agriculture Research Grant Organizer \(ARGO\)](#).

- All paid invoices and the final report must be submitted by 14 January 2027.
- Purchased items and custom work must be delivered on farm between 1 April 2026 and the application's project completion date as per the project acceptance agreement.

Photographs with date stamps and GPS coordinates are required to document conditions before and after completing your project. All photos, Legal Land Descriptions (LLDs) of pre-approved project fields and proof of payment must be submitted by 14 January 2027.

GUIDELINES

Virtual fence collars can only be applied for on your current cattle numbers. Virtual fence collars cannot be applied to future cattle.

The applicant is responsible for ensuring that the project complies with applicable animal-welfare requirements and industry standards.

1. **Field perimeters must be securely fenced.** Note: OFCAF does not fund perimeter fences.
2. **Water distribution systems** – Water distribution may be included as part of a virtual fencing project. Applications for watering systems without virtual fencing improvements to rotational grazing will not be funded in this current opening. Eligible costs include remote watering systems, shallow-water pipeline materials (maximum 2" diameter and less than 15" (38 cm) deep), custom installation, and equipment rental.

Note: ineligible costs include the development of water sources such as new water wells, dugouts or spring developments, and deep, buried water lines.
3. **New to Field** – The BMP must be new to the quarter section. A rotational grazing BMP previously funded by any OFCAF delivery agent on the same quarter section is not considered new and is ineligible.
4. **Logistics** - A formal quote from either Gallagher (eShepherd) or Halter is required for your application. The quote should include evidence that the supplier assessed cellular coverage and determined whether towers are required. Note that towers will not normally be approved for areas where adequate cell service is available.
5. **Other** – Other costs include BMP action plan recommendations, technical assessments or engineered designs. Please describe using the "Other" box in the BMP Action Plan of the template below. The cost of a BMP Action Plan recommendation is up to 10% of the total cost of all eligible BMPs, to a maximum of \$2,000 per Applicant from 2022 to 2028.

MAPPING REQUIREMENTS

The BMP Action Plan must include maps, aerial photos or images of existing conditions and the planned project, as shown in this example.

Include:

- Legal land description (LLD)
- Field boundaries
- Water sources
- Existing perimeter and cross-fences
- Proposed virtual paddocks or anticipated paddock movements. Note: It may not be feasible to describe all paddocks that will be created using virtual fence collars, but you must include a well-defined description of how you will use the virtual fence collars to improve your current forage management
- Significant variation in vegetation and/or topography may require a second map

ELIGIBLE COSTS

- Virtual fence collars (neckbands)
- Towers where cell service is inadequate
- Eligible only as part of an approved virtual fencing project: water-distribution systems that improve rotational grazing management

Example: for NW-56-96-18-W5

INELIGIBLE COSTS

- Perimeter fences
- Repair, maintenance, or upgrades to existing fences or gates
- Brush clearing
- Materials that are currently in farm inventory or not purchased from a recognized dealer
- Trailers
- Development of new water sources
- Water pipelines greater than 2 inches (5 cm) in diameter, surface-only pipelines, and pipelines buried 15 inches (38 cm) or deeper, including deep or frost-free lines, are ineligible.
- Solely limiting livestock access to the existing water
- Platforms such as RANGEVIEW (multi-use devices to display the virtual location of Virtual Fence collars that can reach beyond the project scope)
- Subscription fees
- Total eligible costs that are less than \$10,000 per application

REPORTING – Must include:

- Activation email from the virtual fencing company
- Photo of virtual fence collars on your cattle (date and GPS stamped), ideally with an identifiable person included
- Only activated virtual fence collars will be eligible for reimbursement

ROTATIONAL GRAZING VIRTUAL FENCING - BMP ACTION PLAN

Please note: All costs must exclude GST. Use extra forms to add information and identify individual fields as needed.

Applicant Name								
Type of Virtual Fence (VF)				VF Supplier		# of Head for VF Project		
If you do not own the land, do you have permission from the landowner to install permanent structures (e.g. towers, base station)						Yes	No	
Is the BMP new to the field?		Yes	No	Is the BMP new to the farm?		Yes	No	
(A) VIRTUAL FENCING – Planned date (mo/yr):								
Field	Area	Materials and/or installation		Quantity	Cost/Unit	Cost per Field		
(LLD)	(ac)	(neckband or base station)			(\$/specify)	(\$)		
Total		Cost of Virtual Fencing (A) \$						
(B) WATER DISTRIBUTION – Choose activity and provide planned date (mo/yr)								
Remote water (Y/N):		Shallow pipelines (Y/N):		(C) Other (describe):				
Field	Area	Materials and/or installation		Quantity or Length	Cost/Unit	Cost per Field		
(LLD)	(ac)	(describe)		(specify)	(\$/specify)	(\$)		
Total		Cost of Water Distribution (B) \$						
Is this plan recommended by a Professional Agrologist (PAG) or a Certified Crop Advisor (CCA)?			Yes	No	Have you included a detailed, labelled map of your project? *		Yes	No
Name:		PAG and/or CCA?		Phone number:		Date:		
				Email:				
Cost of Other and/or BMP Action Plan recommendation** (C) \$								
Total Cost of Project (A+B+C) \$								

*Please include an aerial map of the field. Note existing perimeter fences, water sources, and proposed paddocks, as outlined on page 3 of this document. The map can be generated using Google Earth or GeoDiscover Alberta. A [Guide to Locating and Labelling BMP Action Plans](#) is available on the RDAR/OFCAF website. ** May include the cost of a BMP Action Plan recommendation of up to 10% of all eligible BMPs, to a maximum of \$2,000 per applicant (total from 2022 to 2028).

ROTATIONAL GRAZING VIRTUAL FENCING – ADDITIONAL INFORMATION

Please describe using at least 50 words for each question:

1. Describe your plan for placing virtual fence collars on cattle, including the type of squeeze and handling procedures that will be used during collar placement.
2. Describe the frequency of your in-person (eyes-on) inspections of the cattle with virtual fence collars, to assess the need for adjustments or removal.
3. Describe your animal welfare plan for the ongoing use of virtual fence collars. Include actions that will be taken if concerns are identified, and how collar adjustments or removal will be managed in fields where a squeeze is not readily available.
4. Describe your plan for training cattle with virtual fence collars. Include details on the training environment (e.g., paddock size and layout), duration of training, monitoring procedures, and the behavioural indicators that will demonstrate the cattle have been successfully trained.
5. Describe the vegetation types and topographical features on your farm or ranch that would benefit from virtual fencing. How would virtual fencing improve your grazing management practices?
6. Using your labelled map as a reference, outline your virtual fencing plan, including paddock locations, water sources, virtual fence placement, and any planned or potential livestock movements.

Please Confirm:

	Yes	No
The virtual fence will be used only for cattle.		
The field has an existing physical perimeter fence		
The virtual fencing will not be used near roads or highways unless an industry-standard perimeter fence is in place.		
Water sources are available within each grazing paddock.		
I understand that virtual paddocks and system monitoring will be managed using a mobile phone or computer and that users must have the necessary digital skills.		
I understand that the final report must include an activation email from the virtual fencing company and pictures of the collared cattle (date- and GPS-stamped).		

I certify that the information provided in this application is true, complete, and correct to the best of my knowledge.

I attest that all cattle to be fitted with virtual fence collars under this application are currently owned by me and present on my operation. No future or yet-to-be-acquired cattle are included.

I confirm that I have read, understood and agree to the terms and conditions above and that the check box has the same legal force and effect as if the Applicant had signed a printed copy of this document.

I acknowledge that funding is subject to the RDAR–OFCAF Sub-Contribution Agreement and the OFCAF Program Guide.
