

# ROTATIONAL GRAZING

**Please note: If your project involves virtual fencing, use the *Rotational Grazing Virtual Fencing* template.**

The RDAR On-Farm Climate Action Fund (OFCAF) program supports the adoption and on-farm implementation of Beneficial Management Practices (BMPs) that strengthen rotational grazing strategies for cattle by improving forage quality, increasing soil health, and enhancing resilience to changing climates.

OFCAF applicants may choose some or all of the other OFCAF BMPs related to Rotational Grazing, Cover Cropping or Nitrogen Management. Costs of multiple new BMPs within each of the three activity categories can be combined to a maximum grant payment of \$100,000 between April 1, 2022, and March 31, 2028, from all OFCAF sources.

Rotational grazing BMPs rely on four grazing management principles. Although these can differ between fields or farms based on terrain, composition, and water supplies, they must all be considered for effective implementation.

1. Balanced forage supply with livestock demand
2. Growing season rest
3. Avoidance of vulnerable periods
4. Planned animal distribution

Water supply and distribution are critical factors in any rotational grazing system since water is essential for life, growth and reproduction. The quantity of water animals consume is affected by growth, pregnancy, lactation, activity, diet composition, and performance. Research indicates that when provided with high-quality water, livestock will drink more, eat more, and ultimately gain weight faster. Planning for reliable water supplies, such as water wells, dugouts, springs, and OFCAF-funded distribution systems (shallow water pipelines, remote watering systems, etc.), is as important as planning the fence locations for an efficient grazing system.

One of the main objectives of improved rotational grazing is to extend the grazing season into fall and, in some cases, winter. A properly managed grazing system can benefit poorer soils by providing nutrients and organic matter, thereby improving soil structure and health. Feed sampling, including forage testing, ensures a balanced diet and promotes good herd health, ensuring the animal's nutritional needs are met throughout the year based on the animal's production cycle (growth, pregnancy, lactation).

Your grazing management strategy will need to describe all of the components above. How are you addressing the four principles? How will you change your fencing to improve your grazing practice? What are your existing water sources, and how will you distribute the water to ensure that you have a reliable supply for your grazing? How may you improve your pasture composition to meet your livestock needs? What changes will you make to your movement of animals to increase the efficacy of your grazing system?

**Planned activities must go beyond routine practices for your farm or fields.** Applicants may request funding to support eligible practices listed in the [OFCAF Program Guide](#). Please outline how you will apply these practices using the BMP Action Plan on pages 5-7 of this form, including labelled maps that show legal land descriptions (LLDs), field boundaries, water sources and existing fence lines on an aerial photo or imagery. The [Guide to Locating and Labelling BMP Action Plans](#) provides further details. Your completed BMP Action Plan must be recommended by a qualified third-party adviser who is a Professional Agrologist (PAg) or Certified Crop Advisor (CCA); please reference the [Guide to Accessing Agricultural Recommendations in Alberta](#). Your BMP Action Plan must be approved **in writing** by RDAR.

**Important note:** Invoices and proof of payment must be after April 1, 2026, and you must receive RDAR's written approval of your application. Paid invoices must include Legal Land Descriptions (LLDs) for approved project fields and proof of payment by November 30, 2026. Photographs with date stamps and GPS coordinates are required to document conditions before and after completing your project.

## GUIDELINES AND ELIGIBLE COSTS

Please refer to the [OFCAF Program Guide](#) for a complete listing of eligible BMP costs and rates for Rotational Grazing projects. Please note that if the BMP is Virtual Fence see the [Rotational Grazing Template – Virtual Fencing](#).

- 1. Internal permanent or temporary cross fencing** - Costs include supplies for barbed wire, electric fencing setups and custom installation or equipment rentals. See the Fencing Supply List below for more rate information. Fencing specific to other livestock is also eligible such as page wire (example for Bison, Elk, Sheep).
- 2. Water distribution systems** – Water distribution must be part of a rotational grazing improvement. Applications for watering systems alone will not be funded. The costs will not be reimbursed if the project is approved and invoices are submitted for water systems alone. Costs include remote watering systems, shallow water pipeline materials (maximum 2” diameter and less than 15” (38 cm) deep), custom installation and equipment rental. Development of water sources such as new water wells, dugouts or spring developments, and deep, buried water lines are not eligible costs<sup>2</sup>. **Maximum of \$37,500 for eligible expenses from 2025 to 2028**
- 3. Improved pasture composition with perennial legumes** - Costs include seed, custom planting and equipment rentals. The seed mix must include more than 50% perennial legumes and must be seeded by September 15 to allow sufficient growth before winter. Seeding should be done by direct seeding, if possible, with no pasture breaking prior to seeding to minimize GHG emissions. Seeding into native grassland is ineligible.
- 4. New to Field** – The BMP must be new to the quarter section. Previously paid OFCAF projects on fields within the same quarter section are not considered new to the field.

**Other** – Other costs include BMP action plan recommendations, technical assessments or engineered designs. Please describe using the “Other” box in the BMP Action Plan. The cost of a BMP Action Plan recommendation is up to 10% of the total cost of all eligible BMPs, to a maximum of \$2,000 per applicant from 2022 to 2028.

Applications for Cattle Virtual Fencing projects can be made using the [Rotational Grazing Template – Virtual Fencing](#).

<sup>2</sup> Although not eligible for OFCAF funding, other government programs are available for water source development, such as the [Government of Alberta's Water Program](#).

## FENCING SUPPLIES – LIST OF ELIGIBLE COSTS

The cost of fencing is based on the materials listed below. Total cost for an installed fence is based on 50% for materials and 50% custom application. If installed by the applicant, only the cost of materials is eligible. In-kind labour is not an eligible expense. Equipment rentals are only eligible for the project location and duration of the project. Lease or rent-to-own arrangements are not eligible.

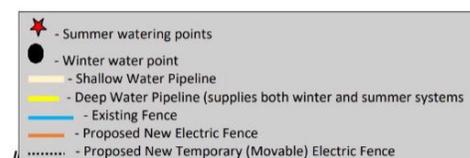

Item	4 Strand Permanent Barbed Wire	2 Strand Permanent Electric Wire
Posts	Line posts with 16.5 foot (5.0 m) spacing 320 posts per mile (199 posts per km)  20 brace posts, 9 corner and gate posts per mile (13 braces, 6 corner and gate posts per km)	Line posts with 48 foot (14.0 m) spacing 110 posts per mile (66 posts per km)  20 brace posts, 9 corner and gate posts per mile (13 braces, 6 corner and gate posts per km)
Wire	Barbed wire, 12.5 gauge, 2 strand (1320 foot roll) 12 rolls for one mile of three-wire fence  16 rolls for one mile of four-wire fence	High tensile wire, 12.5 gauge, single strand (3750 foot roll) Energizer and associated hook-up supplies  4.5 rolls for one mile of three-wire fence 6 rolls for one mile of four-wire fence
Fasteners	Staples - 6.7 pounds (3 kg) of staples per wire for one mile of fence  20 pounds (9 kg) of staples for one mile of three-wire fence  27 pounds (12 kg) of staples for one mile of four-wire fence	Nails - 3 pounds (1.4 kg) of 2.5 inch nails per wire for one mile of fence  9 pounds (4 kg) of nails for one mile of three-wire fence  12 pounds (5.4 kg) of staples for one mile of four-wire fence
Materials & Installation	Up to \$13/m or \$6.50/m if installed by applicant	Up to \$7/m or \$3.50/m if installed by applicant

## MAPPING REQUIREMENTS

The BMP Action Plan must include maps of existing conditions and the planned project on aerial photos or images, as shown in this figure.

Include:

- Legal land description
- Field boundaries
- Existing perimeter and cross fences
- Proposed new fences
  - For temporary fencing show planned fencing movement
  - Include type and length:
    - e.g. electric or barbed
- Water sources
- Water distribution
  - Pipelines
  - Waterers

## INELIGIBLE COSTS

**NOTE: Line items pre-approved in a BMP category cannot be reallocated within that category. For example, individually pre-approved fencing and watering costs cannot be transferred between the two line items.**

### Fencing

- No perimeter fences or exterior fences to the grazing field
- No brush clearing
- No repair or maintenance of existing fences
- Fencing materials that are currently in farm inventory
- Upgrades of gates beyond electric wire or barbed wire (e.g. steel, Texas)

### Water Distribution

- Watering systems, either winter or summer, that do not improve grazing management
- Trailers
- Surface or deep-buried water lines (>15 inches, 38 cm)
- Water systems not purchased from a recognized dealer
- Solely limiting livestock access to existing water sources. This would not be considered improving grazing if done in isolation.

### Improved Pasture

- Tillage of seedbed before seeding
- Seeding only grass into pasture
- Seeding into native grassland
- 100% red clover (must be part of a perennial legume mix with a maximum of 50% clover)
