# Nature Masterminds

The Nature Masterminds series from the Caroline Kramer Faust Foundation is a one-of-a-kind biomimicry program that turns students in grades K through 8 into Nature Masterminds. The program can be adapted for a variety of grade levels and settings, as well as tailored for wherever students live and learn.

Our program is turnkey and can be offered online or in person. Each lesson, taught by experienced educators, includes video recordings of the lessons and activities, materials lists, numbered activity steps, supplemental materials and is mapped to science standards.

# Our Approach

The Nature Masterminds collection urges creative young minds to think through solutions to modern problems and opportunities by looking at how nature approaches life and co-exists. This is done through hands on experimentation and building, online videos, and outdoor exploration.

By connecting students to the classroom in their own backyards, nature and the outdoors, they have the opportunity to not only learn from nature, but find their own connection to in.

By studying different species' adaptations and applying it to STEAM (Science, Technology, Engineering, Art and Math) learning, students will discover all you can learn from nature

Nature Masterminds creates and provides tailored curriculum, continuing education materials, videos and inspiration for camps, educators, after school programs, or just curious kids at home.

## Caroline Kramer Faust Foundation

Formed in 2018 in memory of Caroline, a self-described "Nature Girl" who loved spending time exploring and learning about her connection to the natural world, the Caroline Kramer Faust Foundation seeks to carry on her spirit and passion through education, art, and, most importantly, fun.

At the core of our mission is a deep passion for delivering pioneering programs and immersive learning experiences for young explorers in grades kindergarten to eighth grade. We support biomimicry (study of nature's best ideas to improve human lives and make the world a better place), connecting with nature, and helping creatures or habitats thrive.

Our Nature Masterminds series is ever expanding and we seek funding support to create new content.
